## COURSE OVERVIEW

Drug Identification will educate and supply information regarding the preliminary field identification of illegal and diverted legal drugs, as well as associated paraphernalia to law enforcement personnel. This course serves as a tool and aid in the identification drugs, aimed at the reduction of usage and illicit sales.

Basic drug terminology and the scheduling of drugs based on Controlled Substance ACT (CSA) will be presented. Information will be provided on the chemical make-up of controlled substances as well as the way they are produced for human consumption.

Clandestine labs have change dramatically over the past few years. Although meth labs have been steadily decreasing across the United States, there has been an increase in several types of dangerous micro labs to include Fentanyl, Butane Hash Oil, and Liquid Meth conversation labs. A brief overview regarding common dangers and proper safety equipment will be provided.

Information will be presented on the way the controlled substances are introduced into the human body and physical reactions caused by the use of dangerous controlled substances. This will enable officers with the ability to determine what type of drugs an individual is under the influence and the potential dangers associated with those drugs.
